Summary

You might call me a Prototyper, UX/UI, or Interaction Designer.

I've always worked with the design. Sometimes I worked on consolidated projects, where my work was to redesign the front-end, improving the web, and handing out new features. Sometimes I started on projects after they had just been set up. I've experience working with large scale webs, and I'm looking for a company where I could work hard and smart into a formidable team. I'd like the opportunity to improve myself and become a great Interaction Designer.

Last Jobs
